What you're looking for is indeed possible. The app provides a configurable billing module. You can check the possible configuration options here: <https://demo.aikeedo.com/admin/settings/billing> ttstar ttstar Purchased about 7 hours ago Hi, when could we expect the integration of text to video? heyaikeedo heyaikeedo Author about 4 hours ago Hello @ttstar, If you know of any text-to-video APIs, please feel free to share them with us. We'll investigate and consider implementing them in upcoming releases. ttstar ttstar Purchased about 2 hours ago Should be easy to get started with Stable Diffusion text to video API – <https://stablediffusionapi.com/text-to-video> luancarlos91 luancarlos91 Purchased 3 days ago Hello! I have some questions: 1. How can I change the default Workspace name 'Personal'? And about Voiceover: 2. How can I change the language and phrase of the voice preview? 3. How can I translate the "Insufficient credits" alert since this message is not in the translation file? 4. How can I change the default voice name 'Untitled'? 5. Is it possible to change the order of the language flags? I want my country's flag to appear first. 6. Where can I translate subtitles like "middle-aged male"? Is it possible to change to Use Case? luancarlos91 luancarlos91 Purchased 3 days ago 7. Is it possible to ask for the phone number at registration? heyaikeedo Author about 16 hours ago Hello @luancarlos91, Here are the answers to your questions: 1. You can replace the name of the default workspace at [/src/User/Domain/Entities/UserEntity.php](#) line 457. 2. If you're referring to the voice samples, it's not possible as these samples are provided by third-party services. 3. I have noted this one to fix in the next update. 4. Could you please elaborate on which page you see this string? 5. Yes, you can reorder languages in the [/locale/locale.json](#) file. Be careful not to break the file format. 6. This should be available in the translation files. Make sure you've updated the app to the latest version. 7. At this time, the app does not have such a feature. kemkem95 kemkem95 3 days ago Hi, do you have any demo User portal? heyaikeedo Author 3 days ago Hello @kemkem95, Demo is available at <https://demo.aikeedo.com/> quantri24 quantri24 3 days ago Hi I need these things to be able to buy this file - Elevenlabs v2.5 and nuclear voice - Outlike payment (bank transfer) - Affiliate - Can a regular license be used Saas?

Thanks heyaikeedo Author 3 days ago Hello @quantri24, Here are the answers to your questions: 1. The ElevenLabs Turbo v2.5 model is supported. Could you please clarify what you mean by "nuclear voice"? 2. It is possible to create subscriptions through the admin panel, allowing you to accept payments via bank transfer and manually create subscriptions. If this doesn't address your needs, could you please provide more details? 3. This feature is planned. 4. No, you will need to obtain an Extended License for the SaaS version. quantri24 quantri24 2 days ago Thank you for your quick reply. 1. ElevenLabs Turbo v2.5 My desire is to have a Voice Cloning feature and run on Elevenlabs Turbo V2.5 2. I need Bank Transfer feature Thanks heyaikeedo Author about 16 hours ago The voice cloning feature is on our roadmap. I have noted your requests for consideration. laraware laraware Purchased 4 days ago Thanks for the updates. I still can't use new features after updating from 2.4.3. New features like voice isolator, Classifier and user api doesn't load correctly. here are the photos of disfunctions and console errors : User api won't load: <https://ibb.co/SNHKCDp> Voice isolator: <https://ibb.co/JB2k3Fs> Classifier: <https://ibb.co/jM0X1p4> Console errors: <https://ibb.co/z4wYscY> Console errors are from module.esm.js:425 It's like something is not loading. I don't have any 404 error on files in the network tab. Also I can't change the template categories. They get back to Uncategorized after I click on save. other things work fine. Are they related to any PHP setting or server requirements I have to check or it's something else ? heyaikeedo Author 3 days ago Hello @laraware, It appears that the app is not fully updated. This generally happens when the address of the default public directory has been switched to 'public_html' during the initial installation. If this is the case for you, please manually repeat step 3 of the installation guide after each update: <https://docs.aikeedo.com/get-started/installation-in-cpanel-main-domain> After completing this step, you may need to clear your browser cache. If this is not the case, please contact us at support@aikeedo.com. joykanini joykanini 5 days ago Hello.. on the update I saw you can generate images within the main chat, however, when i try on the demo it says it cant. heyaikeedo Author 3 days ago Can you let me know the email you used to sign up for the demo? joykanini joykanini 3 days ago hilary@pesaswift.com heyaikeedo Author 3 days ago Can you check again? It should work now daryl23 Purchased 5 days ago To enhance the app's billing system, it is important to include deductions for credits related to the storage of images, audio files, and other user files, for both input and output files. For example, if a user uploads 1 GB of images or audio files but only consumes a few credits for processing these files (such as transcription or analysis), it would be beneficial for this storage to also be deducted from the user's account. To achieve this, it would be useful to add an option in the credit indices to set the price to be deducted per MB or GB of storage. This feature should also be compatible with the app's storage plugin. This update would be highly relevant and could be included in the next version of the app. 3 other replies heyaikeedo Author about 16 hours ago During all possible storage usage, the user is actually paying for the AI usage. Even if we implement additional credit usage based on the file size, saved files should still be accessible after downgrades because the user has paid for them. Nonetheless, I've noted your request to the product backlog. daryl23 Purchased about 16 hours ago My idea is this: some users might upload large files for AI processing, like transcription and document analysis. Using a storage plugin, these files would be sent to Cloudflare's R2, for example. I would like you to develop a way to charge users for this storage. For instance, if a user has 100 GB, a certain amount of credits would be deducted from their account every month. I'm not sure what the best logic for this would be, but

it's something I'd like to discuss with you. heyaikeedo Author about 16 hours ago @daryl23, your idea was actually clear. However, the app currently doesn't calculate file storage based on the user, workspace, or plan. Therefore, it won't be possible to charge a monthly fee based on storage usage at this time. As mentioned earlier, your request has been noted for future consideration. gcam1970 gcam1970 Purchased 5 days ago got notice of the ver 2.6 update. My concern or question if I've updated, let say .htaccess how do i prevent that file from being overridden. Is there documentation on performing these update? heyaikeedo Author 5 days ago Hello @gcam1970, Your changes will be overridden (except translations). I recommend tracking the changes you've made on your side and reapplying them if necessary after the update. If you're specifically asking about the .htaccess file, we occasionally make changes to this file. In version 2.6, there have been no changes to the file. You can simply back up the current version of the file and re-upload/override it again after the update. DenneyOG Purchased 6 days ago If i purchase extended licence, would i get a refund on regular licence? heyaikeedo Author 6 days ago Please contact us through the email at support@aikeedo.com enzobahr enzobahr 6 days ago Do you have any upcoming discounts for the new release? I am interested in the Extended Version. heyaikeedo Author 6 days ago Please contact us through the email at support@aikeedo.com enzobahr enzobahr 6 days ago I just did. joykanini joykanini 8 days ago When is the next update? You no longer update every two weeks heyaikeedo Author 6 days ago Update will be available in a today. I'm not sure about your familiarity with software development, but you should consider that the speed of updates can sometimes vary. This is due to the complexities involved in coding, testing, and ensuring everything works smoothly. Our team is committed to delivering a high-quality product, which occasionally requires additional time. enzobahr enzobahr 9 days ago Has this project been abandoned? heyaikeedo Author 9 days ago Hello @enzobahr, No, we're actively working on the project and generally release updates with new features twice a month. mitchell222 mitchell222 11 days ago I commend you for the work so far, I've been waiting for these features so as to purchase please quickly add these features. 1. Outgoing Webhook (e.g triggered when a new user registers, or takes certain action). 2. Users can train chatbot and share chatbot via link or embed. 3. Music and Video generation api heyaikeedo Author 6 days ago Hello @mitchell222, for feature requests please refer to <https://aikeedo.canny.io/> Desvlop Desvlop Purchased 11 days ago Hi, they were going to release an update this past weekend, right? I'll be keeping an eye out. heyaikeedo Author 9 days ago Hello @Desvlop, Still working on it. We will release the update in a few days. enzobahr enzobahr 13 days ago When is chatbot training and end users chatbot creation coming? Will there also be custom categories for the chat bots? How about brand voice? joykanini joykanini 14 days ago 1. Will you release new look theme? 2. Chatbot training 3. Chatbot integration to third party websites 4. Blog wizard 5. WordPress integration Thanks heyaikeedo Author 14 days ago Hello @joykanini, Here are the answers to your questions. 1. If you're referring to the landing page, yes. 2. Yes 3. Feature is in our product backlog, however, its not planned yet. 4. Feature is in our product backlog, however, its not planned yet. 5. Not planned, probably no. bylushin bylushin Purchased 15 days ago Please make sure that when you click the Surprise me button in the image generator, it writes in the language that is selected by default. Writes in English, website in another language. heyaikeedo Author 14 days ago Hello @bylushin, Currently, the prompts generated by the "Surprise me" button are not multilingual. If you are offering the app in only one language, you can replace or translate the predefined

prompts in the following file: /resources/views/templates/app/imagine.twig After making changes to this file, please ensure to clear the app cache for the changes to take effect. Please also note that some AI models expect prompts in English only. Prompts in other languages might result in an error.

mamun23972 mamun23972 15 days ago Do I have to pay for API every month? 1

other reply heyaikeedo Author 14 days ago Hello @mamun23972, Our prices are one-time only. However, you will need to make payments to third-party API providers (such as OpenAI, Cohere, Claude, etc.). Most of these services charge based on usage rather than a monthly subscription. Only OpenAI API key is required to utilize the app; other API integrations are optional. However, please consider that without other APIs, there might be some limitations. For example, the voice isolator tool works only with ElevenLabs. To manage your costs effectively, we offer a free price calculator for Extended License users. With this exclusive calculator, you can easily convert third-party API usage units (tokens, characters, audio seconds, etc.) to the app's universal usage unit—credit—based on your desired profit margin.

mamun23972 mamun23972 13 days ago Thank you for the clarification. So, If i use only OpenAI API chat, writer, coder, imagine, transcriber and voiceover tools will work? heyaikeedo Author 13 days ago Yes. However, you should consider that only OpenAI provided AI models and voices will be available.

anantsparrow12 anantsparrow12 15 days ago does it have customer api? heyaikeedo Author 14 days ago Hello @anantsparrow12, Yes, the app has a customer API. However, please note that a few endpoints are currently undocumented (we plan to include them in the next update). You can find the OAS at <https://demo.aikeedo.com/app/api-docs>.

Alternatively, you can leave comments here using the account from which you purchased the item. Desvlop Desvlop Purchased 16 days ago I'm having a problem with the SMTP configuration. I already entered the data and I got the alert that I connected correctly, but when I tried to send a validation email, nothing came to me. I have my code in a cPanel. Should I do something in my hosting to release outgoing emails? heyaikeedo Author 15 days ago Hello @Desvlop, cPanel blocks access to external SMTP servers by default. Please contact your server administrator to disable SMTP restrictions. Desvlop Desvlop Purchased 15 days ago Thanks, I've solved it now, can you tell me where I can edit the Subject of the emails that are sent? heyaikeedo Author 14 days ago You can set email subjects at following files: - /src/User/Infrastructure/Listeners/SendPasswordRecoveryEmail.php - /src/User/Infrastructure/Services/VerificationEmailService.php - /src/User/Infrastructure/Listeners/SendWelcomeEmail.php - /src/Workspace/Infrastructure/Listeners/SendInvitationEmail.php foodelopers foodelopers Purchased 16 days ago Hello. I left some emails regarding a file that is not loading and about some enquiries (mercadopago cost implementation and app developmen) I want to make sure the email didnt get lost because it has been a few days without replies. My email is foodelopers@gmail.com Thank you very much. heyaikeedo Author 16 days ago Hello @foodelopers, We've replied to your email 5 hours ago. foodelopers foodelopers Purchased 16 days ago Just saw it! Thank you very much heyaikeedo Author 16 days ago You're welcome! bylushin bylushin Purchased 16 days ago Hello. I already want to launch the project as soon as possible. I'm looking forward to the opportunity to analyze documents via chat and 4o mini support heyaikeedo Author 16 days ago Hello @bylushin, The GPT-4o-mini model has already been implemented for the next update. We're also working on the document analysis feature and will try to release it in the next update. bylushin bylushin Purchased 15 days ago Good siqnoise siqnoise Purchased 16 days ago Hi, First of all thanks for the great platform. It looks awesome, clean and works fast :) I had a few follow-up questions: - When is the 'brand' feature going to be live? (That users can save custom fields so that they don't have to fill this out again

and again) - When is the 'ability to train the chatbots with custom data' feature ready? (for the AI assistants feature) - When is the affiliate program planned to be launched? - Can you (or someone from your team) do custom development work? If yes, how can we connect to discuss? Thanks a lot :) P.S. Maybe an idea to structure the product feedback for Aikeedo in a tool like Featurebase.app? Then you don't have everything in comments, you can let users give feedback more structured and you can update users + it's free. heyaikeedo Author 16 days ago

Hello @siqnoise, Thanks for the feedback. Although I'm not able to provide an ETA for the mentioned features, I can assure you that all of these features are in our product roadmap, and we will do our best to deliver them soon. For custom work, you can reach out to us via email at support@aikeedo.com. We actually have a feature request board at Canny: <https://aikeedo.canny.io/> I'll check out Featurebase as well. SSilistre Purchased 16 days ago

Hello team , * * * * * /usr/bin/php /path/to/app/root/cron.php default value , but im using <https://app.neyapayi.com> how can be configure cron? Also when i check azure voice every time seeing upgrade package. Package included azure voice. But still says upgrade plan. Thanks. heyaikeedo Author 16 days ago

Hello @SSilistre, The domain doesn't matter for the cron task. There should be a file called cron.php in the root directory of the app. You should replace [path/to/app/root/cron.php](#) with the actual path. For some servers, you might also need to replace [/usr/bin/php](#) with the actual path of the PHP executable. Please consult your server administrator. Regarding Azure voices, please ensure they are enabled in the plan snapshot of your subscription. It's worth noting that plans and plan snapshot configurations might differ. You can sync snapshot configurations with the current plan config by checking the "Update snapshots" checkbox before saving the plan config. tigakaki1 tigakaki1 16 days ago

Hello Keyaikeedo team, I am very interested in the script , but I need to confirm a few details before making a purchase. Could you please let me know when the feature to add Indonesian payment gateways like Midtrans, Xendit, and Tripay will be implemented? Additionally, I would like to understand the update frequency and the typical timeframe for rolling out new features or updates to the script. heyaikeedo Author 16 days ago

Hello @tigakaki1, Thanks for reaching out. We typically release two updates per month that include new features, along with several minor (patch) updates for bug fixes and minor improvements. We can build custom plugins for Indonesian payment gateways. Please feel free to reach out via email at support@aikeedo.com. imvish imvish Purchased 17 days ago +1 for BYOK (Bring Your Own Key) feature either through Open AI or OpenRouter heyaikeedo Author 16 days ago

We'll try to add it as soon as possible. Currently, we're exploring the possibilities of implementing this feature. hiphopza hiphopza Purchased 17 days ago

i am unable to configure my paystack anymore, this started after the recent update, the payment provider still works on the client side but i cannot change the keys heyaikeedo Author 16 days ago

@hiphopza, could you please let me know what happens when you try to save new keys? Are you able to save other app settings? hiphopza hiphopza Purchased 15 days ago

Yes, i'm able to save other app settings. It displays page not found when i click on the paystack plugin. Like i can't even access where to out the API key heyaikeedo Author 14 days ago

Thanks for providing additional details. Could you please clear the app cache and try again? If this doesn't resolve the issue, please contact us at support@aikeedo.com. If you could provide access to the server, we can investigate the issue directly. mertcanisin Purchased 17 days ago

Hello Locale/locale.json file does not exist. Can you help? This file is required heyaikeedo Author 17 days ago

Hello @mertcanisin, If you've

accidentally deleted the file, you can extract it again from the original zip archive and re-upload it. If this is not the issue you're referring to, could you please provide more details? mertcanisin Purchased 16 days ago Hello, I downloaded the .zip file but it is not really in it. I couldn't find it, could you please send me the locale.json file? heyaikeedo Author 16 days ago Sure, please contact us through the email at support@aikeedo.com ttstar ttstar Purchased 17 days ago Hi, are there any plans and an estimated timeline for allowing users to use their own OpenAI keys? Millions of users already have them, and this feature could significantly expand a customer base. I know you mentioned considering this previously. heyaikeedo Author 16 days ago Hello @ttstar , We'll try to add it as soon as possible. Currently, we're exploring the possibilities of implementing this feature. yasiroubaali yasiroubaali Purchased 18 days ago hi sir i have this problem on my website <https://nexuzai.com/>. Fatal error: Uncaught Twig\Error\LoaderError: There are no registered paths for namespace "theme". in /home/u675672546/domains/nexuzai.com/vendor/twig/twig/src/Loader/FilesystemLoader.php:204 heyaikeedo Author 18 days ago Hello @yasiroubaali, This issue generally happens when file structure is changed incorrectly. Could you please confirm if you have made any changes to the file structure? If you are trying to install the app for the main domain in cPanel, please ensure you follow this guide: <https://docs.aikeedo.com/get-started/installation-in-cpanel-main-domain>. This guide is slightly different from the standard installation guide, particularly in step 3. yasiroubaali yasiroubaali Purchased 18 days ago okay i fixed the first error now i have "Failed to create order" using paypal sandbox heyaikeedo Author 17 days ago Please ensure that the correct API key is included and select one of the supported currencies. Additionally, if you plan to monetize the app, please remember that an Extended License is required. Charging end users to access the app with a Regular License is not legally permitted and could lead to the permanent termination of the license. For compliance, I kindly request you to upgrade to an Extended License if you intend to charge your users. nihaomanizaima nihaomanizaima 19 days ago hi , may i know where is the demo for users and admin? thanks heyaikeedo Author 19 days ago Hello @nihaomanizaima, Thank you for reaching out. The login page for both admin and user access is <https://demo.aikeedo.com/login> Admin login credentials are provided on the login page itself. To log in as a user, please sign up with your email. Once registered, you will receive 100 free credits to test the app features as a user. nihaomanizaima nihaomanizaima 18 days ago heyaikeedo, just check the demo, i am doing some comparison which script to kick start, do you have video too? i realized some of the script provide video generation. heyaikeedo Author 18 days ago Mentioned feature is not available yet, however its in our product roadmap. taa_phuwit taa_phuwit 21 days ago Can you please add Thai language in the Article Generator section? heyaikeedo Author 19 days ago Noted. It will be added in next update. taa_phuwit taa_phuwit 19 days ago thank you KrazyJ Purchased 24 days ago Hey Guys, I have noticed issues with "Web Search" features when using GPT4o and Sonnet 3.5. It start the search but no response please can you guys check, please add some more toast notification for error handling on user side, so that we can notify user that something went wrong etc. Just getting no response with no error message makes the user confused that what happened... Hope this makes sense. 12 other replies heyaikeedo Author 3 days ago Please make sure that the image models are enabled by navigating to Settings > Features > Imagine page. Although the models might appear as enabled by default, I recommend pressing the Save button on this page and trying again. Additionally, ensure that this capability is enabled globally under Settings >

Features > Chat page, and that it is included in your plan and plan snapshot. KrazyJ Purchased 3 days ago Well thanks, saving the page again and clearing cache worked :) I was able to give prompt and generate image but i noticed that it only generates 1:1 ration or 1024×1024 size images even if you prompt the image to be 16:9 ratio. SS:

<https://drive.google.com/file/d/1gOitMh8wQOJ1YQ7nJte5JcmJ1InRBOCI/view?usp=sharing> Are you guys going to improve this please, also add skeleton loading while it's generating image that looks cool. Now we urgently need pre-defined prompt library feature :) Thanks heyaikeedo Author about 16 hours ago Glad to hear that the issue is now resolved. Currently, the chat generates images in the default size and ignores all other parameters except for the AI model. I have noted your requests for future consideration. peterknight7247 peterknight7247 24 days ago When next update? :) heyaikeedo Author 24 days ago Probably within 10 days. draggerz draggerz 24 days ago Hi, Is there a way to Humanize AI Content within this application? heyaikeedo Author 24 days ago Hello @draggerz, As all the source codes of the app are open and clean, it's technically possible. I have also noted your request in our product backlog for consideration in future updates. Anky015 Anky015 Purchased 25 days ago Hi, How to Sync Voice from elevenlabs.io manually? heyaikeedo Author 24 days ago Hello @Anky015, The voice list should sync once an hour. To manually sync the list, you can execute the following SQL query in your app database: DELETE FROM option WHERE

key='voice_list_fetch_date'; nassimbjf Purchased 25 days ago sorry SaberPlug 25 days ago Can I buy a regular license and later upgrade to an extended one (by paying the difference)? heyaikeedo Author 25 days ago Hello @SaberPlug, Thanks for reaching out. I'm curious as to how those who've implemented as SaaS are doing. Just curious heyaikeedo heyaikeedo Author 25 days ago Hello @gcam1970, Thanks for reaching out. At this time we don't have any community page. onionmart onionmart 26 days ago I have 4 licences for MagicAI products. But their licence management policy is evil. I want to change my script to Aikeedo but I don't know how to move my customers over. is it possible to transfer user information? heyaikeedo heyaikeedo Author 26 days ago Hello @onionmart, Thanks for reaching out. We can help you migrate the user accounts with the following data: First Name, Last Name, Email, and Password. Migration of other data might not be possible as the data structure is not compatible. dumalex dumalex Purchased 26 days ago trained chatbots? heyaikeedo Author 26 days ago Hello @dumalex, Mentioned feature is not yet implemented. We'll try to add it in upcoming releases. lazmanya lazmanya Purchased 27 days ago Hello, I couldn't find where to set the language. heyaikeedo Author 26 days ago Hello @lazmanya, You can find the translation files in the /locale directory for both the app and admin, and in the /public/content/plugins/heyaikeedo/default/locale directory for the landing page. To translate, simply find the appropriate locale file (.po files) and insert your translations into the msgstr fields, ensuring the msgid values remain unchanged. Additionally, you can enable or disable languages using the /locale/locale.json file. Users already logged into the app can change the language from their profile page, which can be accessed by clicking their name from the account menu located at the bottom left side of the app dashboard. Website visitors who have not logged into an account yet should see the language switcher at the top right side of the website header, near the login button. lazmanya lazmanya Purchased 26 days ago How can I change the site language to Turkish? :) heyaikeedo Author 25 days ago Here are the step-by-step instructions for you: 1. Open the `/locale/locale.json` file and set the value of the "enabled" parameter to `true` for the Turkish language. If you haven't made changes to this file earlier, this parameter is located at line 132. 2. Locate the translation file for Turkish at `/locale/tr-TR/LC_MESSAGES/messages.po`. 3. Open this file and add your translation

strings to the `msgstr` sections inside the double quotation marks. Ensure that the `msgid` sections remain unchanged. Also, make sure you don't alter the overall structure of the file. 4. Locate the second translation file for Turkish at `public/content/plugins/heyaikeedo/default/locale/tr-TR/LC_MESSAGES/the me.po`. 5. Repeat step 3 for this file as well.

theoz theoz Purchased 28 days ago Please add an advanced AI text editor. Existing is too basic and don't work well for SEO articles. heyaikeedo Author 27 days ago Mentioned feature is already in our product backlog. We'll check it for the future updates. Anky015 Anky015 Purchased 28 days ago check this new model :- gpt-4o-mini If you can add it in next update! heyaikeedo Author 27 days ago Mentioned model will definitely be added in next update imvish imvish Purchased 28 days ago openrouter.ai would be nice to integrate heyaikeedo Author 27 days ago Noted foodelopers foodelopers Purchased 28 days ago Hi. Can you integrate Mercadopago? im trying to find a way to contact you heyaikeedo Author 27 days ago Hello @foodelopers, Please contact us through the email at support@aikeedo.com foodelopers foodelopers Purchased 25 days ago sent an email yesterday. kindly waiting for your response. thank you heyaikeedo Author 25 days ago replied Anky015 Anky015 Purchased 28 days ago I wanted to share some feedback on the new unified credit system in Aikeedo AI after 2.0. The previous version's tool-specific credit management provided better control and flexibility. The unified system has created confusion and limits our ability to offer options like unlimited image generations for the Imagine tool / cannot provide unlimited usage for single tool if we want too. Additionally, restricting access to the Excel calculator for extended license subscribers is problematic, as it is an essential tool for managing credits effectively. I believe adding option to the previous system or offering more flexibility would benefit users. Thank you for considering my feedback. heyaikeedo Author 27 days ago Hello @Anky015, Thank you for your feedback. I want to clarify that since each third-party system charges API usage based on different units and generates various outputs, charging based on images, words, seconds, etc., is not reasonable. For unlimited credits, you can leave the "Credit limit" field in the plans empty. Since it's not legally allowed to charge end users with a Regular License, setting the credit ratios with a Regular License doesn't make sense. That's why the Price Calculator is necessary only for Extended License holders. You should set the credit ratios to 0 if you're a Regular License holder. If you intent to monetize the app, I kindly ask you upgrading the license. It's important to note that any misuse of the license could result in its permanent termination. grizzlyagencyhello grizzlyagencyhello 28 days ago Thanks for the response. I cannot respond to the last question. I currently have an AI Tattoo Image Generation SaaS tool and I'm looking to change to your software. The questions that I have: 1. Can I Disable all tools other than the image generator? 2. Can I rename the image generator from "imagine" 3. Can I add a custom prompt on the Image Generator for Tattoo Style Designs 4. Can I have multiple image generators under tools with custom prompts? If the answer to any of the above is "NO", do you offer paid services and if so who do I contact about that? Thank you kindly – the tools looks awesome heyaikeedo Author 27 days ago Hello @grizzlyagencyhello, Here are the answers to your questions: 1. Yes, you can easily enable or disable available tools directly from the Admin UI. 2. Yes, it's possible. 3. It is possible to adjust the user's prompt on the backend with a minor code modification. We can assist you with this. 4. Such a feature is not possible at this time. Modifications in several aspects of the code might be required for this. We are available for small customizations at this time. Feel free to reach out through email:

support@aikeedo.com. grizzlyagencyhello grizzlyagencyhello 28 days ago Is it possible to have multiple image generators with prompts? Can I change the name "imagine" and the intro text. If these features are not available, will they be soon? heyaikeedo Author 28 days ago Hello @grizzlyagencyhello, Thanks for reaching out. I'm not sure I fully understood your first question. Users have the option to select the AI model while generating an image. However, it's not possible to generate multiple images at once; only one image can be generated at a time. Additionally, as an admin, you'll have the option to enable or disable AI models globally and based on the plan. If this doesn't answer your question, could you please elaborate? It is possible to change the name and intro text for tools. The best way to set these values is through the translation files. We can provide more details on this matter after the purchase. jvirtuel jvirtuel Purchased 29 days ago Hello, are you planning on adding an Affiliate system anytime soon ? thanks heyaikeedo Author 29 days ago Hello @jvirtuel, Yes, an affiliate system is indeed on our roadmap, and we aim to implement it as soon as possible. We are currently exploring third-party services for integration to ensure smooth affiliate tracking and payouts. If you have any service suggestions, please feel free to share them with us. laraware laraware Purchased 30 days ago After I update the script, there is an issue. Voice Isolator and Classifier doesn't work. Can it's like system can't upload anything. I can't upload pwa icon, also the imagine feature doesn't work. is there anything I should do after update ? 2 other replies laraware laraware Purchased 29 days ago Now the problem is Voice Isolator and Classifier doesn't load correctly. ago Also api in user account does not show correctly. I checked the language file but it seems
there is no problem with the language file. heyaikeedo Author 29 days ago Please ensure that
you copy and overwrite all files from /public to /public_html again, as the app doesn't
handle this automatically during the update process. Afterward, you might need to clear the
browser cache. vidvideo vidvideo Purchased 30 days ago We are having issues making

changes to the landing page, where can we can the color and content for the landing page if possible. Also the update done for changing the color scheme isnt working heyaikeedo Author 30 days ago Hello @vidvideo, Could you please let me know what happens when you try to change the content or the color? Anky015 Anky015 Purchased about 1 month ago Hello! I Updated script to v2.5 by fresh installation , but i am getting does not allow the value . for some tools like transcribe, imagine etc How can i fix it or whats the issue ? Make sure i have added API keys for open ai and Elevenlabs 1 other reply heyaikeedo Author 30 days ago Hello @Anky015, "does not allow the value" issue is originated from a missing configuration value for the site domain, which should be set on the Settings > General Settings page. Could you please check and confirm whether this value has been set? <https://snipboard.io/BcnpGH.jpg> Anky015 Anky015 Purchased 30 days ago Fixed, Thanks a lot heyaikeedo Author 30 days ago You're welcome! peterknight7247 peterknight7247 about 1 month ago Hi, I think i found a bug When on imagine and create an image and then click on library on the main left menu it doesn't actually take you there Maybe need a new menu that says images or something so they all in one place Also when on chat to ai etc i wish that when typed a message and then i am able to press enter to send message instead of clicking peterknight7247 peterknight7247 about 1 month ago Sorry ignore that i found it :D heyaikeedo Author 30 days ago Marking this comment as read as per your request. peterknight7247 peterknight7247 about 1 month ago Hi, Which DigitalOcean VPS would you recommend for this script to run smoothly? <https://ibb.co/q5Tpb6F> heyaikeedo Author 30 days ago Hello @peterknight7247, For a VPS, we recommend a minimum of 4GB RAM, 2 CPU cores, and 120GB of disk space. You can then increase the server resources as your user base grows. esrefyasa24 esrefyasa24 about 1 month ago we cannot give a user a manual package or credit. how can we do this? heyaikeedo Author 30 days ago Subscriptions are linked to workspaces rather than individual users. To find a user's workspaces, go to the Users page in the admin section, locate the user and scroll to the bottom. From there, navigate to the desired workspace page. You can create a subscription by clicking on either the "Change plan" or "Create subscription" button. For future inquiries, please contact us from the account through which the purchase was made. laraware laraware Purchased about 1 month ago Hello, I want to update my script. I go to admin > Update and Choose the new file that I've downloaded from envato (aikeedo-server-files.zip) . When I click on proceed update, it stuck in loading for a long time without an error. and when I try to see what is happening in Inspect element (Network tab), it shows pending request from api/update with 0 byte size. How can I update the platform ? Thanks for the great support 2 other replies laraware laraware Purchased 30 days ago is there any PHP functions use in update that I cloud make sure it's enabled ? laraware laraware Purchased 30 days ago Problem solved. it was my browser problem. heyaikeedo Author 30 days ago Glad to hear that the issue is now resolved. ntnx6 ntnx6 Purchased about 1 month ago Hi @heyaikeedo 1. I installed the latest version 2.5 and integrated it with the OpenAI API. But the generated Coder doesn't seem to work. I enter text and click generate button but then nothing happens, no response and no error message. (The remaining functions work properly). 2. How can I check the app log for errors? heyaikeedo Author 30 days ago Hello @ntnx6, 1. Could you please check and confirm if your plan snapshot uses one of the OpenAI models for the Coder tool? 2. The location of the error log file depends on the service configuration. You can find the exact location by checking either the php.ini file or the output of the phpinfo function. If you're using shared hosting or cPanel, the error log file might be either in the root

directory or in the public_html directory. 1 2 3 4 5 ... 32 Regular License Regular License

To enhance the app's billing system, it is important to include deductions for credits related to the storage of images, audio files, and other user files, for both input and output files. For example, if a user uploads 1 GB of images or audio files but only consumes a few credits for processing these files (such as transcription or analysis), it would be beneficial for this storage to also be deducted from the user's account. To achieve this, it would be useful to add an option in the credit indices to set the price to be deducted per MB or GB of storage. This feature should also be compatible with the app's storage plugin. This update would be highly relevant and could be included in the next version of the app.

3 other replies

heyaikeedo Author about 16 hours ago During all possible storage usage, the user is actually paying for the AI usage. Even if we implement additional credit usage based on the file size, saved files should still be accessible after downgrades because the user has paid for them. Nonetheless, I've noted your request to the product backlog.

darly23 Purchased about 16 hours ago My idea is this: some users might upload large files for AI processing, like transcription and document analysis. Using a storage plugin, these files would be sent to Cloudflare's R2, for example. I would like you to develop a way to charge users for this storage. For instance, if a user has 100 GB, a certain amount of credits would be deducted from their account every month. I'm not sure what the best logic for this would be, but it's something I'd like to discuss with you.

heyaikeedo Author about 16 hours ago @darly23, your idea was actually clear. However, the app currently doesn't calculate file storage based on the user, workspace, or plan. Therefore, it won't be possible to charge a monthly fee based on storage usage at this time. As mentioned earlier, your request has been noted for future consideration.

luancarlos91 luancarlos91 Purchased 3 days ago Hello! I have some questions: 1. How can I change the default Workspace name 'Personal'? And about Voiceover: 2. How can I change the language and phrase of the voice preview? 3. How can I translate the "Insufficient credits" alert since this message is not in the translation file? 4. How can I change the default voice name 'Untitled'? 5. Is it possible to change the order of the language flags? I want my country's flag to appear first. 6. Where can I translate subtitles like "middle-aged male"? Is it possible to change to Use Case? luancarlos91 luancarlos91 Purchased 3 days ago 7. Is it possible to ask for the phone number at registration?

heyaikeedo Author about 16 hours ago Hello @luancarlos91, Here are the answers to your questions: 1. You can replace the name of the default workspace at `/src/User/Domain/Entities/UserEntity.php` line 457. 2. If you're referring to the voice samples, it's not possible as these samples are provided by third-party services. 3. I have noted this one to fix in the next update. 4. Could you please elaborate on which page you see this string? 5. Yes, you can reorder languages in the `/locale/locale.json` file. Be careful not to break the file format. 6. This should be available in the translation files. Make sure you've updated the app to the latest version. 7. At this time, the app does not have such a feature.

KrazyJ Purchased 24 days ago Hey Guys, I have noticed issues with "Web Search" features when using GPT4o and Sonnet 3.5. It start the search but no response please can you guys check, please add some more toast notification for error handling on user side, so that we can notify user that something went wrong etc. Just getting no response with no error message makes the user confused that what happened... Hope this makes sense.

heyaikeedo Author 3 days ago Please make sure that the image models are enabled by navigating to Settings > Features > Imagine page. Although the models might appear as enabled by default, I recommend pressing the Save button on this page and trying again.

Additionally, ensure that this capability is enabled globally under Settings > Features > Chat page, and that it is included in your plan and plan snapshot. KrazyJ Purchased 3 days ago Well thanks, saving the page again and clearing cache worked :) I was able to give prompt and generate image but i noticed that it only generates 1:1 ration or 1024×1024 size images even if you prompt the image to be 16:9 ratio. SS:

<https://drive.google.com/file/d/1gOitMh8wQOJ1YQ7nJte5JcmJ1InRBOCI/view?usp=sharing> Are you guys going to improve this please, also add skeleton loading while it's generating image that looks cool. Now we urgently need pre-defined prompt library feature :) Thanks heyaikeedo Author about 16 hours ago Glad to hear that the issue is now resolved. Currently, the chat generates images in the default size and ignores all other parameters except for the AI model. I have noted your requests for future consideration. laraware laraware Purchased 4 days ago Thanks for the updates. I still can't use new features after updating from 2.4.3. New features like voice isolator, Classifier and user api doesn't load correctly. here are the photos of disfunctions and console errors : User api won't load: <https://ibb.co/SNHKCDp> Voice isolator: <https://ibb.co/JB2k3Fs> Classifier: <https://ibb.co/jM0X1p4> Console errors: <https://ibb.co/z4wYscY> Console errors are from module.esm.js:425 It's like something is not loading. I don't have any 404 error on files in the network tab. Also I can't change the template categories. They get back to Uncategorized after I click on save. other things work fine. Are they related to any PHP setting or server requirements I have to check or it's something else ? heyaikeedo Author 3 days ago Hello @laraware, It appears that the app is not fully updated. This generally happens when the address of the default public directory has been switched to 'public_html' during the initial installation. If this is the case for you, please manually repeat step 3 of the installation guide after each update:

<https://docs.aikeedo.com/get-started/installation-in-cpanel-main-domain> After completing this step, you may need to clear your browser cache. If this is not the case, please contact us at support@aikeedo.com. gcam1970 gcam1970 Purchased 5 days ago got notice of the ver 2.6 update. My concern or question if I've updated, let say .htaccess how do i prevent that file from being overridden. Is there documentation on performing these update? heyaikeedo Author 5 days ago Hello @gcam1970, Your changes will be overridden (except translations). I recommend tracking the changes you've made on your side and reapplying them if necessary after the update. If you're specifically asking about the .htaccess file, we occasionally make changes to this file. In version 2.6, there have been no changes to the file. You can simply back up the current version of the file and re-upload/override it again after the update. DenneyOG Purchased 6 days ago If i purchase extended licence, would i get a refund on regular licence? heyaikeedo Author 6 days ago Please contact us through the email at support@aikeedo.com

Desvlop Desvlop Purchased 11 days ago Hi, they were going to release an update this past weekend, right? I'll be keeping an eye out. heyaikeedo Author 9 days ago Hello @Desvlop, Still working on it. We will release the update in a few days. bylushin bylushin Purchased 15 days ago Please make sure that when you click the Surprise me button in the image generator, it writes in the language that is selected by default. Writes in English, website in another language. heyaikeedo Author 14 days ago Hello @bylushin, Currently, the prompts generated by the "Surprise me" button are not multilingual. If you are offering the app in only one language, you can replace or translate the predefined prompts in the following file:

/resources/views/templates/app/imagine.twig After making changes to this file, please ensure to

clear the app cache for the changes to take effect. Please also note that some AI models expect prompts in English only. Prompts in other languages might result in an error. hiphopza hiphopza Purchased 17 days ago i am unable to configure my paystack anymore, this started after the recent update, the payment provider still works on the client side but i cannot change the keys heyaikeedo Author 16 days ago @hiphopza, could you please let me know what happens when you try to save new keys? Are you able to save other app settings? hiphopza hiphopza Purchased 15 days ago Yes, i'm able to save other app settings. It displays page not found when i click on the paystack plugin. Like i can't even access where to out the API key heyaikeedo Author 14 days ago Thanks for providing additional details. Could you please clear the app cache and try again? If this doesn't resolve the issue, please contact us at support@aikeedo.com. If you could provide access to the server, we can investigate the issue directly. Desvlop Desvlop Purchased 16 days ago I'm having a problem with the SMTP configuration. I already entered the data and I got the alert that I connected correctly, but when I tried to send a validation email, nothing came to me. I have my code in a cPanel. Should I do something in my hosting to release outgoing emails? heyaikeedo Author 15 days ago Hello @Desvlop, cPanel blocks access to external SMTP servers by default. Please contact your server administrator to disable SMTP restrictions. Desvlop Desvlop Purchased 15 days ago Thanks, I've solved it now, can you tell me where I can edit the Subject of the emails that are sent? heyaikeedo Author 14 days ago You can set email subjects at following files: - /src/User/Infrastructure/Listeners/SendPasswordRecoveryEmail.php - /src/User/Infrastructure/Services/VerificationEmailService.php - /src/User/Infrastructure/Listeners/SendWelcomeEmail.php - /src/Workspace/Infrastructure/Listeners/SendInvitationEmail.php bylushin bylushin Purchased 16 days ago Hello. I already want to launch the project as soon as possible. I'm looking forward to the opportunity to analyze documents via chat and 4o mini support heyaikeedo Author 16 days ago Hello @bylushin, The GPT-4o-mini model has already been implemented for the next update. We're also working on the document analysis feature and will try to release it in the next update. bylushin bylushin Purchased 15 days ago Good foodelopers foodelopers Purchased 16 days ago Hello. I left some emails regarding a file that is not loading and about some enquiries (mercadopago cost implementation and app developmen) I want to make sure the email didnt get lost because it has been a few days without replies. My email is foodelopers@gmail.com Thank you very much. heyaikeedo Author 16 days ago Hello @foodelopers, We've replied to your email 5 hours ago. foodelopers foodelopers Purchased 16 days ago Just saw it! Thank you very much heyaikeedo Author 16 days ago You're welcome! siqnoise siqnoise Purchased 16 days ago Hi, First of all thanks for the great platform. It looks awesome, clean and works fast :) I had a few follow-up questions: - When is the 'brand' feature going to be live? (That users can save custom fields so that they don't have to fill this out again and again) - When is the 'ability to train the chatbots with custom data' feature ready? (for the AI assistants feature) - When is the affiliate program planned to be launched? - Can you (or someone from your team) do custom development work? If yes, how can we connect to discuss? Thanks a lot :) P.S. Maybe an idea to structure the product feedback for Aikeedo in a tool like Featurebase.app? Then you don't have everything in comments, you can let users give feedback more structured and you can update users + it's free. heyaikeedo Author 16 days ago Hello @siqnoise, Thanks for the feedback. Although I'm not able to provide an ETA for the mentioned features, I can assure you

that all of these features are in our product roadmap, and we will do our best to deliver them soon. For custom work, you can reach out to us via email at support@aikeedo.com. We actually have a feature request board at Canny: <https://aikeedo.canny.io/> I'll check out Featurebase as well.

SSilistre Purchased 16 days ago Hello team , * * * * * /usr/bin/php /path/to/app/root/cron.php default value , but im using <https://app.neyapayi.com> how can be configure cron? Also when i check azure voice every time seeing upgrade package. Package included azure voice. But still says upgrade plan. Thanks.

heyaikeedo Author 16 days ago Hello @SSilistre, The domain doesn't matter for the cron task. There should be a file called cron.php in the root directory of the app. You should replace [path/to/app/root/cron.php](#) with the actual path. For some servers, you might also need to replace [/usr/bin/php](#) with the actual path of the PHP executable. Please consult your server administrator. Regarding Azure voices, please ensure they are enabled in the plan snapshot of your subscription. It's worth noting that plans and plan snapshot configurations might differ. You can sync snapshot configurations with the current plan config by checking the "Update snapshots" checkbox before saving the plan config.

ttstar ttstar Purchased 17 days ago Hi, are there any plans and an estimated timeline for allowing users to use their own OpenAI keys? Millions of users already have them, and this feature could significantly expand a customer base. I know you mentioned considering this previously.

heyaikeedo Author 16 days ago Hello @ttstar , We'll try to add it as soon as possible. Currently, we're exploring the possibilities of implementing this feature.

invish invish Purchased 17 days ago +1 for BYOK (Bring Your Own Key) feature either through Open AI or OpenRouter

heyaikeedo Author 16 days ago We'll try to add it as soon as possible. Currently, we're exploring the possibilities of implementing this feature.

mertcanisin Purchased 17 days ago Hello Locale/locale.json file does not exist. Can you help? This file is required

heyaikeedo Author 17 days ago Hello @mertcanisin, If you've accidentally deleted the file, you can extract it again from the original zip archive and re-upload it. If this is not the issue you're referring to, could you please provide more details?

mertcanisin Purchased 16 days ago Hello, I downloaded the .zip file but it is not really in it. I couldn't find it, could you please send me the locale.json file?

heyaikeedo Author 16 days ago Sure, please contact us through the email at support@aikeedo.com

yasiroubaali yasiroubaali Purchased 18 days ago hi sir i have this problem on my website <https://nexuzai.com/>. Fatal error: Uncaught Twig\Error\LoaderError: There are no registered paths for namespace "theme". in /home/u675672546/domains/nexuzai.com/vendor/twig/twig/src/Loader/FilesystemLoader.php:204

heyaikeedo Author 18 days ago Hello @yasiroubaali, This issue generally happens when file structure is changed incorrectly. Could you please confirm if you have made any changes to the file structure? If you are trying to install the app for the main domain in cPanel, please ensure you follow this guide: <https://docs.aikeedo.com/get-started/installation-in-cpanel-main-domain>. This guide is slightly different from the standard installation guide, particularly in step 3.

yasiroubaali yasiroubaali Purchased 18 days ago okey i fixed the first error now i have "Failed to create order" using paypal sandbox

heyaikeedo Author 17 days ago Please ensure that the correct API key is included and select one of the supported currencies. Additionally, if you plan to monetize the app, please remember that an Extended License is required. Charging end users to access the app with a Regular License is not legally permitted and could lead to the permanent termination of the license. For compliance, I kindly request you to upgrade to an Extended License if you intend to charge your users.

micronix micronix Purchased 2 months

ago Hello heyaikeedo, I have analyzed the code and also tried it on many server types and I have to say that your framework does not perform well. You say that it is important for you that quality counts, but the benchmarks say something else. The response time for a simple aiikedo 404 page on a NGINX PHP-FPM 8.3 server is over 1.5 seconds while on laravel it is 500ms or even less which is essential for such an app. You should replace your framework with an existing one like laravel. Why Prefer Laravel Web Development Framework? - Built-in functions & add-ons - Top-level security - Seamless data migration - Low server overhead - Robust Tool Integration - Vast Developer Community Source:

<https://www.linkedin.com/pulse/10-top-php-frameworks-robust-web-development-rndexperts-l65cf> 11 other replies micronix micronix Purchased 25 days ago I think i have the solution. The problem is the location of the server in the datacenter tried on all time us servers and this caused the long response time. If i choosed a server in my country the response was faster then ever micronix micronix Purchased 25 days ago Hello Community, this is my badass optimized nginx config in hope this helps someone it is really fast. /etc/nginx/sites-available/default: server { listen 80 default_server; listen [::]:80 default_server ipv6only=on; # Root directory for the web server root /var/www/html/public; index index.php index.html index.htm; # Server name configuration server_name localhost; # Enable Gzip compression for various file types to reduce the size of the responses gzip on; gzip_types text/plain text/css application/json application/javascript text/xml application/xml application/xml+rss text/javascript image/webp; gzip_vary on; gzip_proxied any; gzip_comp_level 6; gzip_buffers 16 8k; gzip_http_version 1.1; gzip_min_length 256; location / { # Try to serve request as a file, then as a directory, then fall back to index.php try_files \$uri \$uri/ /index.php?\$query_string; } # PHP-FPM configuration for processing PHP files location ~ \.php\$ { include snippets/fastcgi-php.conf; fastcgi_pass unix:/run/php/php8.3-fpm.sock; fastcgi_cache php_cache; fastcgi_cache_valid 200 60m; fastcgi_cache_use_stale error timeout updating; add_header X-FastCGI-Cache \$upstream_cache_status; } # Static asset caching for improved performance location ~* \.(css|js|vtt|x-component|xml|xhtml+xml|rss+xml|js|javascript|x-javascript|x-httpd-php|x-httpd-fastphp|atom+xml|json|ld+json|ms-fontobject|x-font-ttf|x-web-app-manifest\+json|opentype|svg+xml|x-icon|webp)\$ { expires 1y; add_header Cache-Control "public"; } location ~* \.(gif|jpg|jpeg|png|ogg|mp4|webm|webp)\$ { expires 1M; add_header Cache-Control "public"; } # No caching for JSON, XML, HTML, and similar files location ~* \.(json|xml|html|x-icon|x-component|cache-manifest)\$ { expires -1; add_header Cache-Control "no-store, no-cache, must-revalidate, proxy-revalidate"; } # Deny access to .htaccess files for security location ~ /\.ht { deny all; } # Custom error pages error_page 404 /404.html; error_page 500 502 503 504 /50x.html; location = /50x.html { root /usr/share/nginx/html; } /etc/nginx/nginx.conf: user www-data; worker_processes auto; pid /run/nginx.pid; error_log /var/log/nginx/error.log; include /etc/nginx/modules-enabled/*.conf; events { worker_connections 768; # multi_accept on; } http { fastcgi_cache_path /var/cache/nginx levels=1:2 keys_zone=php_cache:100m inactive=60m; fastcgi_cache_key "\$scheme\$request_method\$host\$request_uri"; ## # Basic Settings ## sendfile on; tcp_nopush on; types_hash_max_size 2048; # server_tokens off; # server_names_hash_bucket_size 64; # server_name_in_redirect off; include /etc/nginx/mime.types; default_type application/octet-stream; ## # SSL Settings ## ssl_protocols TLSv1 TLSv1.1 TLSv1.2 TLSv1.3; # Dropping SSLv3, ref: POODLE ssl_prefer_server_ciphers on; ## # Logging Settings ##

days ago Hi, How to Sync Voice from elevenlabs.io manually? heyaikeedo heyaikeedo Author

24 days ago Hello @Anky015, The voice list should sync once an hour. To manually sync the list, you can execute the following SQL query in your app database: `DELETE FROM option WHERE key='voice_list_fetch_date';` gcam1970 gcam1970 Purchased 25 days ago Hi, I'm interested in this product, but haven't seen a discord or any community around it. I'm curious as to how those who've implemented as SaaS are doing. Just curious heyaikeedo Author 25 days ago Hello @gcam1970, Thanks for reaching out. At this time we don't have any community page. lazmanyanya lazmanyanya Purchased 27 days ago Hello, I couldn't find where to set the language. heyaikeedo Author 26 days ago Hello @lazmanyanya, You can find the translation files in the `/locale` directory for both the app and admin, and in the `/public/content/plugins/heyaikeedo/default/locale` directory for the landing page. To translate, simply find the appropriate locale file (`.po` files) and insert your translations into the `msgstr` fields, ensuring the `msgid` values remain unchanged. Additionally, you can enable or disable languages using the `/locale/locale.json` file. Users already logged into the app can change the language from their profile page, which can be accessed by clicking their name from the account menu located at the bottom left side of the app dashboard. Website visitors who have not logged into an account yet should see the language switcher at the top right side of the website header, near the login button. lazmanyanya lazmanyanya Purchased 26 days ago How can I change the site language to Turkish? :) heyaikeedo Author 25 days ago Here are the step-by-step instructions for you: 1. Open the `/locale/locale.json` file and set the value of the "enabled" parameter to `true` for the Turkish language. If you haven't made changes to this file earlier, this parameter is located at line 132. 2. Locate the translation file for Turkish at `/locale/tr-TR/LC_MESSAGES/messages.po`. 3. Open this file and add your translation strings to the `msgstr` sections inside the double quotation marks. Ensure that the `msgid` sections remain unchanged. Also, make sure you don't alter the overall structure of the file. 4. Locate the second translation file for Turkish at `public/content/plugins/heyaikeedo/default/locale/tr-TR/LC_MESSAGES/the me.po`. 5. Repeat step 3 for this file as well. dumalex dumalex Purchased 26 days ago trained chatbots? heyaikeedo Author 26 days ago Hello @dumalex, Mentioned feature is not yet implemented. We'll try to add it in upcoming releases. KrazyJ Purchased about 2 months ago Hey guys. I just wanna request can you speed up update frequency. As right now alot of basic / chat features are in roadmap. Hope you guys can do something fast about those. Really amazing product I know development takes time but see if you guys can do something. Thanks awaiting new updates and features as I really wanna start using it as a SaaS for my clients. 16 other replies KrazyJ Purchased 28 days ago Let's please add "GPT-4o mini" in next coming update and if possible please allow image generation inside AI Chat Features also like Gemini. Thanks :) heyaikeedo Author 27 days ago Mentioned features are already in our roadmap. GPT-4o mini model will definitely be added in next update KrazyJ Purchased 27 days ago Awesome, Thanks guys awaiting updates :) theoz theoz Purchased 28 days ago Please add an advanced AI text editor. Existing is too basic and don't work well for SEO articles. heyaikeedo Author 27 days ago Mentioned feature is already in our product backlog. We'll check it for the future updates. Anky015 Anky015 Purchased 28 days ago check this new model :- gpt-4o-mini If you can add it in next update! heyaikeedo Author 27 days ago Mentioned model will definitely be added in next update JAIZONLINE JAIZONLINE Purchased about 1 month ago Hi, after the

setup and admin settings etc. is now completed. How do I edit the theme/ content in the pages? Therefore the headings, text, images etc. on the homepages and other pages? Thanks 1 other reply heyaikeedo Author about 1 month ago Hello @JAIZONLINE, Landing page customizations: Theme files are located in the

`/public/content/plugins/heyaikeedo/default/` directory. To avoid changes in the landing page theme with each update, you should create a duplicate of the current theme and make your customizations there. Here are the steps to follow: 1. Duplicate the default theme (located at `/public/content/plugins/heyaikeedo/default`) to a new location within the `/public/content/plugins/` directory, for example, `/public/content/plugins/yourorganization/themename`. 2. Open the `composer.json` file in the duplicated theme and update the name to “yourorganization/themename”. Ensure that this name corresponds with the theme location within the `/public/content/plugins/` directory. 3. Access the Themes page in the admin UI and locate your new theme. Activate it. 4. Enable debug mode in the app. 5. Make the necessary changes to the new theme files. 6. Clear the app cache. 7. Disable debug mode. Colors: To customize the theme colors, you can navigate to `/public/content/plugins/heyaikeedo/default/layouts/theme.twig`, and for the app/admin colors, you'll find them in `/resources/views/layouts/base.twig`. Both files use RGB values to specify colors Localization: The best way to change headings is to do so through the localization files. You can find the translation files in the `/locale` directory for both the app and admin, and in the

`/public/content/plugins/heyaikeedo/default/locale` directory for the landing page (home page). To translate, simply find the appropriate locale file (`.po` files) and insert your translations into the `msgstr` fields, ensuring the `msgid` values remain unchanged. Languages can be enabled/disabled in the `/locale/locale.json` file. Users already logged into the app can change the language from their profile page, which can be accessed by clicking their name from the account menu located at the bottom left side of the app dashboard. Website visitors who have not logged into an account yet should see the language switcher at the top right side of the website header, near the login button. During development, you should enable the debug mode. After finishing the work, make sure to disable the debug mode and clear the app cache. Debug mode and cache management can be done on the Status page in the Admin UI. Should you have any other question, let me know. JAIZONLINE JAIZONLINE Purchased 28 days ago HI, Thank you for this tutorial, its was very easy to follow and simple to execute. I was able to do it with ease. heyaikeedo Author 27 days ago Glad to hear that. Should you have any other question, let me know. invish invish Purchased 28 days ago openrouter.ai would be nice to integrate heyaikeedo Author 27 days ago Noted Anky015 Anky015 Purchased 28 days ago I wanted to share some feedback on the new unified credit system in Aikeedo AI after 2.0. The previous version's tool-specific credit management provided better control and flexibility. The unified system has created confusion and limits our ability to offer options like unlimited image generations for the Imagine tool / cannot provide unlimited usage for single tool if we want too. Additionally, restricting access to the Excel calculator for extended license subscribers is problematic, as it is an essential tool for managing credits effectively. I believe adding option to the previous system or offering more flexibility would benefit users. Thank you for considering my feedback. heyaikeedo Author 27 days ago Hello @Anky015, Thank you for your feedback. I

want to clarify that since each third-party system charges API usage based on different units and generates various outputs, charging based on images, words, seconds, etc., is not reasonable. For unlimited credits, you can leave the "Credit limit" field in the plans empty. Since it's not legally allowed to charge end users with a Regular License, setting the credit ratios with a Regular License doesn't make sense. That's why the Price Calculator is necessary only for Extended License holders. You should set the credit ratios to 0 if you're a Regular License holder. If you intent to monetize the app, I kindly ask you upgrading the license. It's important to note that any misuse of the license could result in its permanent termination.

laraware laraware Purchased 30 days ago After I update the script, there is an issue. Voice Isolator and Classifier doesn't work. Can it's like system can't upload anything. I can't upload pwa icon, also the imagine feature doesn't work. is there anything I should do after update ?

2 other replies

ago Also api in user account does not show correctly. I checked the language file but it seems
there is no problem with the language file. heyaikeedo Author 29 days ago Please ensure that
you copy and overwrite all files from [/public](#) to [/public_html](#) again, as the app doesn't
handle this automatically during the update process. Afterward, you might need to clear the
browser cache. jvirtuel jvirtuel Purchased 29 days ago Hello, are you planning on adding an
Affiliate system anytime soon ? thanks heyaikeedo Author 29 days ago Hello @jvirtuel, Yes, an
affiliate system is indeed on our roadmap, and we aim to implement it as soon as possible. We
are currently exploring third-party services for integration to ensure smooth affiliate tracking and
payouts. If you have any service suggestions, please feel free to share them with us. laraware
laraware Purchased about 1 month ago Hello, I want to update my script. I go to admin >
Update and Choose the new file that I've downloaded from envato (aikeedo-server-files.zip) .
When I click on proceed update, it stuck in loading for a long time without an error. and when I

try to see what is happening in Inspect element (Network tab), it shows pending request from api/update with 0 byte size. How can I update the platform ? Thanks for the great support 2 other replies laraware laraware Purchased 30 days ago is there any PHP functions use in update that I cloud make sure it's enabled ? laraware laraware Purchased 30 days ago Problem solved. it was my browser problem. heyaikeedo Author 30 days ago Glad to hear that the issue is now resolved. vidvideo vidvideo Purchased 30 days ago We are having issues making changes to the landing page, where can we can the color and content for the landing page if possible. Also the update done for changing the color scheme isnt working heyaikeedo Author 30 days ago Hello @vidvideo, Could you please let me know what happens when you try to change the content or the color? Anky015 Anky015 Purchased about 1 month ago Hello! I Updated script to v2.5 by fresh installation , but i am getting does not allow the value . for some tools like transcribe, imagine etc How can i fix it or whats the issue ? Make sure i have added API keys for open ai and Elevenlabs 1 other reply heyaikeedo Author 30 days ago Hello @Anky015, "does not allow the value" issue is originated from a missing configuration value for the site domain, which should be set on the Settings > General Settings page. Could you please check and confirm whether this value has been set? <https://snipboard.io/BcnpGH.jpg> Anky015 Anky015 Purchased 30 days ago Fixed, Thanks a lot heyaikeedo Author 30 days ago You're welcome! ntnx6 ntnx6 Purchased about 1 month ago Hi @heyaikeedo 1. I installed the latest version 2.5 and integrated it with the OpenAI API. But the generated Coder doesn't seem to work. I enter text and click generate button but then nothing happens, no response and no error message. (The remaining functions work properly). 2. How can I check the app log for errors? heyaikeedo Author 30 days ago Hello @ntnx6, 1. Could you please check and confirm if your plan snapshot uses one of the OpenAI models for the Coder tool? 2. The location of the error log file depends on the service configuration. You can find the exact location by checking either the php.ini file or the output of the phpinfo function. If you're using shared hosting or cPanel, the error log file might be either in the root directory or in the public_html directory. stefano9213 stefano9213 Purchased about 2 months ago Hi there. I bought the app and made it online but i have differents functions not working : 1) image generator 2) Transcriber 3) voiceover once i try to sun this function it tells me "does not allow the value" . I added chat gpt api and the content creator part and code part is working but if i try to generate one image using dall-e model it gives me the error reported above. heyaikeedo Author about 2 months ago Hello stefano9213, "does not allow the value" issue is originated from a missing configuration value for the site domain, which should be set on the Settings > General Settings page. Could you please check and confirm whether this value has been set? <https://snipboard.io/BcnpGH.jpg> stefano9213 stefano9213 Purchased about 1 month ago Hi I had to wait for domain migration but i finally did it ! It's kind of working better but is still not working and bugged <https://ibb.co/zQLy3c3> You can check how it looks like here. heyaikeedo Author about 1 month ago Hello @stefano9213, According to the screenshot, I suspect the value is not included in the expected form. Please note that this value should not contain any path or http parts. It should match your domain exactly. For example, if you've hosted the app at yourdomain.com, then the value must be exactly yourdomain.com (without the http part or any path). webhopeltd webhopeltd Purchased about 1 month ago Hello, I hope you are well. You have “upcoming features” written and each version contains none of those features. heyaikedo heyaikedo Author about 1 month ago Hello @hehiro, The mentioned features are indeed under development. Please note that there are currently many features under development. The “Upcoming Features” post doesn't reflect the complete picture and admittedly, it is a bit outdated. We'll update it soon. Sorry for the inconvenience. switchgital Purchased about 1 month ago Hey team! Testing your new update via your demo website and faced issue with analyzing instagram accounts. I just put simple prompt to analyze instagram account for few metrics (like what post most liked). Bot started “scanning the website” and then went blank. It shows that the bot sends me a reply but it's empty. Tried to analyze my website and it works, but with insta bot went dumb mode. Just telling you, in case if you can fix this. Thank you for a great product! heyaikedo Author about 1 month ago Hello @switchgital, Thanks for bringing this issue to our attention. We'll check and try to fix it soon. ntnx6 ntnx6 Purchased about 1 month ago Hello Aikeedo, Please kindly introduce the guide on upgrading SaaS to the latest version. Thanks & rgds. heyaikedo Author about 1 month ago Hello @ntnx6, We've replied to your email. bylushin bylushin Purchased about 1 month ago Great job! Thanks for the update. I'm really looking forward to when it will be possible to pin documents for analysis in the chat. heyaikedo Author about 1 month ago Hello @bylushin, Document support for the chat is already planned. We'll try to implement it in upcoming releases. webhopeltd webhopeltd Purchased about 1 month ago Hello, I hope you are well. Firstly, I would like to congratulate you on your excellent work and strongly encourage you to continue in this manner. I have a few questions to ask in order to resolve the issues I am encountering with the script: 1. Redesign of the Landing Page I wish to modify the design of the

landing page. Could you please indicate where the corresponding files are located and which ones I need to modify? 2. Customization of Assistants in the Chat Option When the chat option is activated, we have the possibility to create customized assistants with the choice of title, description, and system instructions. However, there is always a default assistant to which we unfortunately cannot provide system instructions to enhance its performance. Could you please tell me where I can do this, which file to modify, and how to proceed? Thank you in advance for your professionalism, and I once again encourage you for your excellent work. Best regards, heyaikeedo Author about 1 month ago Hello @webhopeltd, Thank you for reaching out and for your feedback. I appreciate it. Here are the answers to your questions: Landing Page

Customization The landing page files are located in the

`/public/content/plugins/heyaikeedo/default` directory. To prevent changes in the landing page theme with each update, you should create a duplicate of the current theme and make your customizations there. Follow these steps: 1. Duplicate the default theme (found at `/public/content/plugins/heyaikeedo/default`) to a new location within the `/public/content/plugins/` directory, for example,

`/public/content/plugins/yourorganization/themename`. 2. Open the

`composer.json` file in the duplicated theme and update the name to

"yourorganization/themename". Ensure that this name corresponds to the theme location within the `/public/content/plugins/` directory. 3. Access the Themes page in the admin UI and locate your new theme. Activate it. 4. Enable debug mode in the app. 5. Make the necessary changes to the new theme files. 6. Clear the app cache. 7. Disable debug mode. During development, you should enable the debug mode. After finishing the work, make sure to disable the debug mode and clear the app cache. Both actions can be performed on the Status page in the Admin UI. Alternatively, you can use third-party services like WordPress or Framer for custom landing pages. The app allows you to disable the default landing page. This way, you can install the app on a subdomain such as `app.yourdomain.com` and set up the custom landing page on the main domain (`yourdomain.com`) using any software or service you prefer.

Assistants The default chatbot is the simplest form of the chat and does not contain any instructions. It is an integral part of the app and cannot be disabled. You can think of the default bot as similar to ChatGPT without assistants. While it is not recommended to modify the default chat, if you still want to add instructions, you can modify the `MessageService` classes found under the subdirectories of `/src/Ai/Infrastructure/Services/`. ntnx6 ntnx6 Purchased about 1 month ago Hello Heyaikeedo, Can you share a free credit ratio calculator for me? I have purchased a Extend License. I have sent a email with some questions to `support@aikeedo.com` but not repsonse from you. heyaikeedo Author about 1 month ago Marking this comment as read since we have already communicated through email. ntnx6 ntnx6 Purchased about 1 month ago That's great, thank you. skycn skycn Purchased about 1 month ago Hello, I have a feature suggestion Clipdrop has increased its API price by 8x since it was acquired by Jasper. It seems very expensive now. ClipDrop prices just make AI studio irrelevant. I think it can be replaced by a competitor. NovitaAI has all the same methods available and the API can be prepaid like openai. I'd strongly suggest using novitaAI. Thank you heyaikeedo Author about 1 month ago Hello @skycn, I have added the NovitaAI integration to our product backlog. We'll explore the possibilities for integration in future updates. skycn skycn Purchased about 1 month ago That's

great, thank you. heyaikeedo Author about 1 month ago You're welcome! dumalex dumalex Purchased about 1 month ago do you have a solution for this chat error? "TypeError: Cannot read properties of null (reading 'id')"

2 other replies heyaikeedo Author about 1 month ago Hello @dumalex, We reviewed your website and it seems the app is encountering an error on the backend during message creation. Could you please check the PHP error log for detailed information? If the log is empty, please contact us via email and provide access to your server so we can debug the issue. Our mail address is support@aikeedo.com

dumalex dumalex Purchased about 1 month ago I sent it, please tell me what the problem is, here is a test environment, if I go live and it does the same, I don't want to bother you anymore.

heyaikeedo Author about 1 month ago The issue should be fixed now. Details have been sent to your email.

laraware laraware Purchased about 1 month ago Hello, Thanks for the great products. I have one problem right now, I've enabled clip drop in setting > features, I enabled it from Setting > Clipdrop with an API key, I also enabled it in user Plan. But Clipdrop doesn't show on Imagine page. Even I make it the default Image engine in settings. Cache is also disable and cleared.

1 other reply heyaikeedo Author about 1 month ago Hello @laraware, Thank you for bringing the Clipdrop issue to our attention. It seems there is a minor bug related to the Clipdrop configuration. We'll address it in our upcoming update, scheduled for release in a few days. You can find the files for the plans page at /resources/views/templates/app/billing/plans.twig for any customizations you wish to make. During development, please ensure you enable debug mode. Once your work is complete, remember to disable debug mode and clear the app cache. Both of these actions can be managed on the Status page in the Admin UI.

laraware laraware Purchased about 1 month ago Thank you so much for your help. I really enjoyed for what you guys created. Congrats

heyaikeedo Author about 1 month ago Happy to assist! Godzilla912 Godzilla912 Purchased about 1 month ago When we create assistant, make it Instructions or direct ASSISTANT id from open ai so we can use fine tune. and more option to train our bot.

heyaikeedo Author about 1 month ago Hello @Godzilla912, Unfortunately, model training is not available at the moment. However, we have plans to incorporate this feature in future updates.

Sangwan Sangwan Purchased about 1 month ago Please help me with Pagination on various lists. We have 119 users and still all these appears on single page. Please add Pagination on Users, Workspaces, Orders and other pages.

heyaikeedo Author about 1 month ago Hello @Sangwan, The app has a built-in cursor-based pagination system. Data is loaded incrementally as the user scrolls to the bottom of the page, rather than all at once. Typically, data is fetched in chunks of 25 objects at a time, ensuring a smooth user experience without overwhelming the system.

Sangwan Sangwan Purchased about 1 month ago Wow! Never realised that. Good Work! evneai evneai Purchased about 1 month ago demo site : <https://ibb.co/V2SQPNQ> my site : <https://ibb.co/3zMW57N> How can I add these pictures? thank you.

heyaikeedo Author about 1 month ago Hello @evneai, Due to Envato's policy against AI-generated images, we can only use placeholders. Please contact us through the email to get images available on our landing page. Our mail address is support@aikeedo.com

laraware laraware Purchased about 1 month ago Hello, I downloaded the install file but it doesn't contain /install folder. How can I install the script ?

2 other replies heyaikeedo Author about 1 month ago This issue generally occurs when the files are not extracted to the correct directory. To better assist you, could you please provide the following information to our email address? - The absolute path of the directory where you've extracted the aikeed-server-files.zip archive file. -

The document root directory of the domain. laraware laraware Purchased about 1 month ago Got it, it was a directory problem. I moved files to root and the public folder files into public_html and it fixed now. Thanks heyaikeedo Author about 1 month ago You're welcome. Should you have any other question, feel free to reach out. jvirtuel jvirtuel Purchased about 2 months ago Hello, thanks for the great script, but something i don't understand, i have read a lot of comment, you say the app support localisation, i did find the other language, i try to activate other languages but i don't see the option nowhere in admin, also i did find the translations under content>plugins>Heyaikeedo > default>locale >en-US i did modify some things there but even after clearing the cache it wont load the new translation in the front page. My second question is regarding customisation, you say we can make our own template but there is no instruction at all on how to do it, can you please give more information because if not my customisation will be lost on update, thank you heyaikeedo Author about 2 months ago Hello @jvirtuel, Thanks for reaching out. Localization: You can find the translation files in the `/locale` directory for both the app and admin, and in the `/public/content/plugins/heyaikeedo/default/locale` directory for the landing page (home page). To translate, simply find the appropriate locale file (.po files) and insert your translations into the `msgstr` fields, ensuring the `msgid` values remain unchanged. Languages can be enabled/disabled in the `/locale/locale.json` file. Users already logged into the app can change the language from their profile page, which can be accessed by clicking their name from the account menu located at the bottom left side of the app dashboard. Website visitors who have not logged into an account yet should see the language switcher at the top right side of the website header, near the login button. Landing page customizations: Theme files are located in the `/public/content/plugins/heyaikeedo/default/` directory. To avoid changes in the landing page theme with each update, you should create a duplicate of the current theme and make your customizations there. Here are the steps to follow: 1. Duplicate the default theme (located at `/public/content/plugins/heyaikeedo/default`) to a new location within the `/public/content/plugins/` directory, for example, `/public/content/plugins/yourorganization/themename`. 2. Open the `composer.json` file in the duplicated theme and update the name to "yourorganization/themename". Ensure that this name corresponds with the theme location within the `/public/content/plugins/` directory. 3. Access the Themes page in the admin UI and locate your new theme. Activate it. 4. Enable debug mode in the app. 5. Make the necessary changes to the new theme files. 6. Clear the app cache. 7. Disable debug mode. During development, you should enable the debug mode. After finishing the work, make sure to disable the debug mode and clear the app cache. Debug mode and cache management can be done on the Status page in the Admin UI. Should you have any other question, let me know. martinisepicllc1 martinisepicllc1 Purchased about 2 months ago when I install it its all just a white screen martinisepicllc1 martinisepicllc1 Purchased about 2 months ago its either a white screen of 403 forbidden, I changed permissions and its not working heyaikeedo Author about 2 months ago Marking this comment as read since we have already communicated through email. meekmedia meekmedia Purchased about 2 months ago Hi, When can we expect Affiliate system, coupon codes(bulk codes generations) can be live? heyaikeedo Author about 2 months ago Hello @meekmedia, We aim to implement the features you mentioned within the following month. However, I would like to highlight that the

bulk coupon code generation feature is not currently planned. Godzilla912
Purchased about 2 months ago after install frontend not working "HTTP ERROR 500" but i can log in to admin panel how to fix this error? heyaikeedo Author about 2 months ago Hello @Godzilla912, A 500 error indicates an issue on the backend. The PHP error log should contain details about the problem. Could you please check this log file and share the details with us through the email? Our mail address is support@aikeedo.com daryl23
Purchased about 2 months ago Suggestion for improving credit rates: currently, it is possible to set fixed credit rates for each API used, which generally already includes the profit margin and dollar conversion to a given currency, which is great. However, this can be further enhanced by adding specific fields for the profit margin and dollar conversion value. This way, the system would automatically calculate the price of API credits based on these parameters. For example, the fixed rates for APIs in dollars per unit generally do not change, but the administrator could set the profit margin and dollar conversion, allowing the system to calculate new credit rates including these parameters. The system would then use this calculation to deduct user credits. Although you provide an Excel spreadsheet for this calculation in extended licenses, which is positive, why not include this functionality directly in the code? It would be very useful to allow the administrator to set the profit margin and currency conversion directly on the credit rates page. Thank you. 1 other reply heyaikeedo Author about 2 months ago Hello @daryl23, Even though credit ratios are calculated based on the Credits per USD value, our calculator allows you to define credit limits for a pricing plan in any currency. Since nearly all third-party API services set their pricing in USD, we need to convert their usage units to credits based on the USD price. Although third-party rates do not change frequently, they can still change, so hard-coding these prices into the codebase would not be ideal. Thus, we cannot implement the profit margin calculation directly into the codebase. The Azure issue you've reported is unexpected. Could you please contact us via email and share the access details to your server for further investigation? Our email address is support@aikeedo.com. daryl23
Purchased about 2 months ago Hello, I completely understand. I have nothing to complain about, only to thank you for this amazing script. Everything I'm mentioning is for improvement purposes. I will check if I can resolve the issue here with Azure, which seems to be an isolated case. If I can't, I will get in touch. Regarding the credit rates, that's exactly what I meant: implementing the Excel calculations on the exchange rates page. But I understand that Excel is an extra and strategic resource for extended licenses, and that's fine. Thank you. heyaikeedo Author about 2 months ago @daryl23, I appreciate your input, and I want to clarify that I understood your previous message as feedback rather than a complaint. I was simply explaining the reason behind having the calculator separate from the main codebase. Your constructive feedback is always welcome, and I value your support in this matter. lars_c lars_c
Purchased about 2 months ago I know my support has just ended, however a suggestion or question: Can we assign specific templates/voices or any kind of content to a SPECIFIC workspace or subscription only? Meaning the templates assigned to one workspace or subscription are not visible for the other. heyaikeedo Author about 2 months ago Hello @lars_c, The feature you mentioned is already on our product backlog. We will review the possibilities of implementing it in upcoming releases. ttstar ttstar
Purchased about 2 months ago After updating to the latest release, Chat window is not showing the conversation. Installed fresh instance too, same issue. Enabled Debug: The issue is: Uncaught Type Error: Cannot read properties of undefined (reading 'length') – in

module.esm.js:425 – it's an Alpine Expression Error. I checked the DB table: entries are available. How to fix this? heyaikeedo Author about 2 months ago Hello @ttstar, It appears that the files in the public directory are not being updated correctly. If you are using the public_html directory as a domain root instead of the app's default /public directory, please follow these additional steps after updating the app to the latest version: 1. Find the /home/username/bootstrap/container.php file and update line 21 as below: \$webroot = \$rootDir . '/public_html'; 2. Move and overwrite all files from the /public directory to the /public_html directory. Afterward, make sure to clear the browser cache. ttstar ttstar Purchased about 2 months ago We didn't change it – the domain root still points to domainname/public_html/public Does it have to do with some modules that we haven't installed? During the setup process, you show some suggested modules that are not needed but recommended: Name Status amqp Not Installed mongodb Not Installed xdebug Not Installed pcov Not Installed uuid Not Installed uopz Not Installed heyaikeedo Author about 2 months ago I don't think the issue is related to the optional modules. Could you please re-upload all files in the app's public directory and try again? If this doesn't resolve the issue, please contact us via email at support@aikeedo.com with access details to your server for further investigation. 1 2 3 4 5 ... 18 Regular License Regular License Selected \$59 Use, by you or one client, in a single end product which end users are not charged for. It's super intuitive and easy to use, even for those with little experience. When I needed help, the support team was incredibly quick and resolved everything efficiently. I'm very satisfied with my purchase! for Feature Availability by Devesh_Kumar 1 month ago for Customer Support by dylandonald7707 1 month ago This company is great! I am not a big tech guy and I was struggling a lot when trying to set up my Aikeedo platform. Vusal always responded to my questions and basically fixed all the problems for me. Customer support will not be a problem with these guys. Thanks for Other by ricardosommerfeld 1 month ago It's an efficient and well-structured SaaS platform, the best I've seen. Furthermore, it has a fantastic support team, always ready to assist and resolve any problems, making the user experience even more positive. Highly recommended. for Customer Support by designedbyshivam 2 months ago Vusal is a great guy, always responds with the correct solutions, which means he is very knowledgeable. Aikeedo is a great product, and I'm here for the long run! for Code Quality by leadsowing 2 months ago for Customer Support by Sangwan 2 months ago Excellent Support and Code Quality. It will be great if you can add comprehensive documentation also. for Customer Support by Godzilla912 2 months ago super fast..... for Code Quality by daryl23 2 months ago I just wanted to say that you guys did an amazing job on this script. And we understand that it's normal for an exceptional and well-crafted update to take a little time. Thank you very much for the work done so far and keep up the good work on this script. I'm very pleased. for Code Quality by usnet 3 months ago for Customer Support by bylushin 3 months ago Great author! I bought his products and do not regret. Great support, helps with any questions, takes into account your wishes! I am delighted! Very high quality code, you can immediately see that the developer is serious about his work. Thank you! for Customer Support by amazonskyler 3 months ago Customer support was excellent, offering prompt assistance and resolving my issue with utmost professionalism. Their dedication to customer satisfaction truly shines through. for Code Quality by MA1KAN 3 months ago Simply the best looking and functioning script in his class. Very clean and modern interface, I love the Chat feature which in my opinion looks better than the ChatGPT one. Support is top notch and for sure this is my choice for my AI website. After trying so many scripts, I gave aikeedo a chance and I don't regret it. Keep it up with the good work guys! for Code Quality by mickmackmuck 3 months ago This script features clean and well-structured code. It is currently my preferred choice for starting my business, as it prioritizes quality and projects seriousness. I have tried several AI scripts, but this is the only one that has truly convinced me. I hope they maintain this level of excellence. for Customer Support by gSnippy 4 months ago I'm not sure that I have anything negative to report. This application is great in every way! Great code quality, great UI/UX, and most importantly their support is super friendly, helpful and quick! Can't wait to see how Aikeedo evolves! for Code Quality by anupchaudhari93

4 months ago Excellent work! The code's quality is truly impressive, and the design is outstanding. for Code Quality by imvish 4 months ago amazzzing :) for Customer Support by skyg5834 5 months ago I recently purchased this script and I must say, my experience has been nothing short of exceptional. From the moment I encountered a hiccup during the installation process, the support team was right there to assist me. Their prompt and efficient guidance made the setup process a breeze, reflecting the outstanding quality of service they provide. Furthermore, the script itself is a testament to high-quality coding and design. It's evident that a great deal of thought and expertise has been invested in creating a product that's not only functional but also user-friendly and robust. The seamless integration, intuitive features, and flawless performance of the script have significantly enhanced my project, exceeding my expectations in every way. I'm thoroughly impressed with the professionalism and the caliber of the product and support offered. For anyone in need of a top-notch script, backed by a team that truly cares about your success, look no further than this remarkable offering on CodeCanyon. It's a decision you won't regret! for Design Quality by heihei_moana 5 months ago What a beautiful product! for Design Quality by german125 6 months ago 1 2 Regular License Regular License Selected \$59 Use, by you or one client, in a single end product which end users are not charged for.
